

20+
BBPs

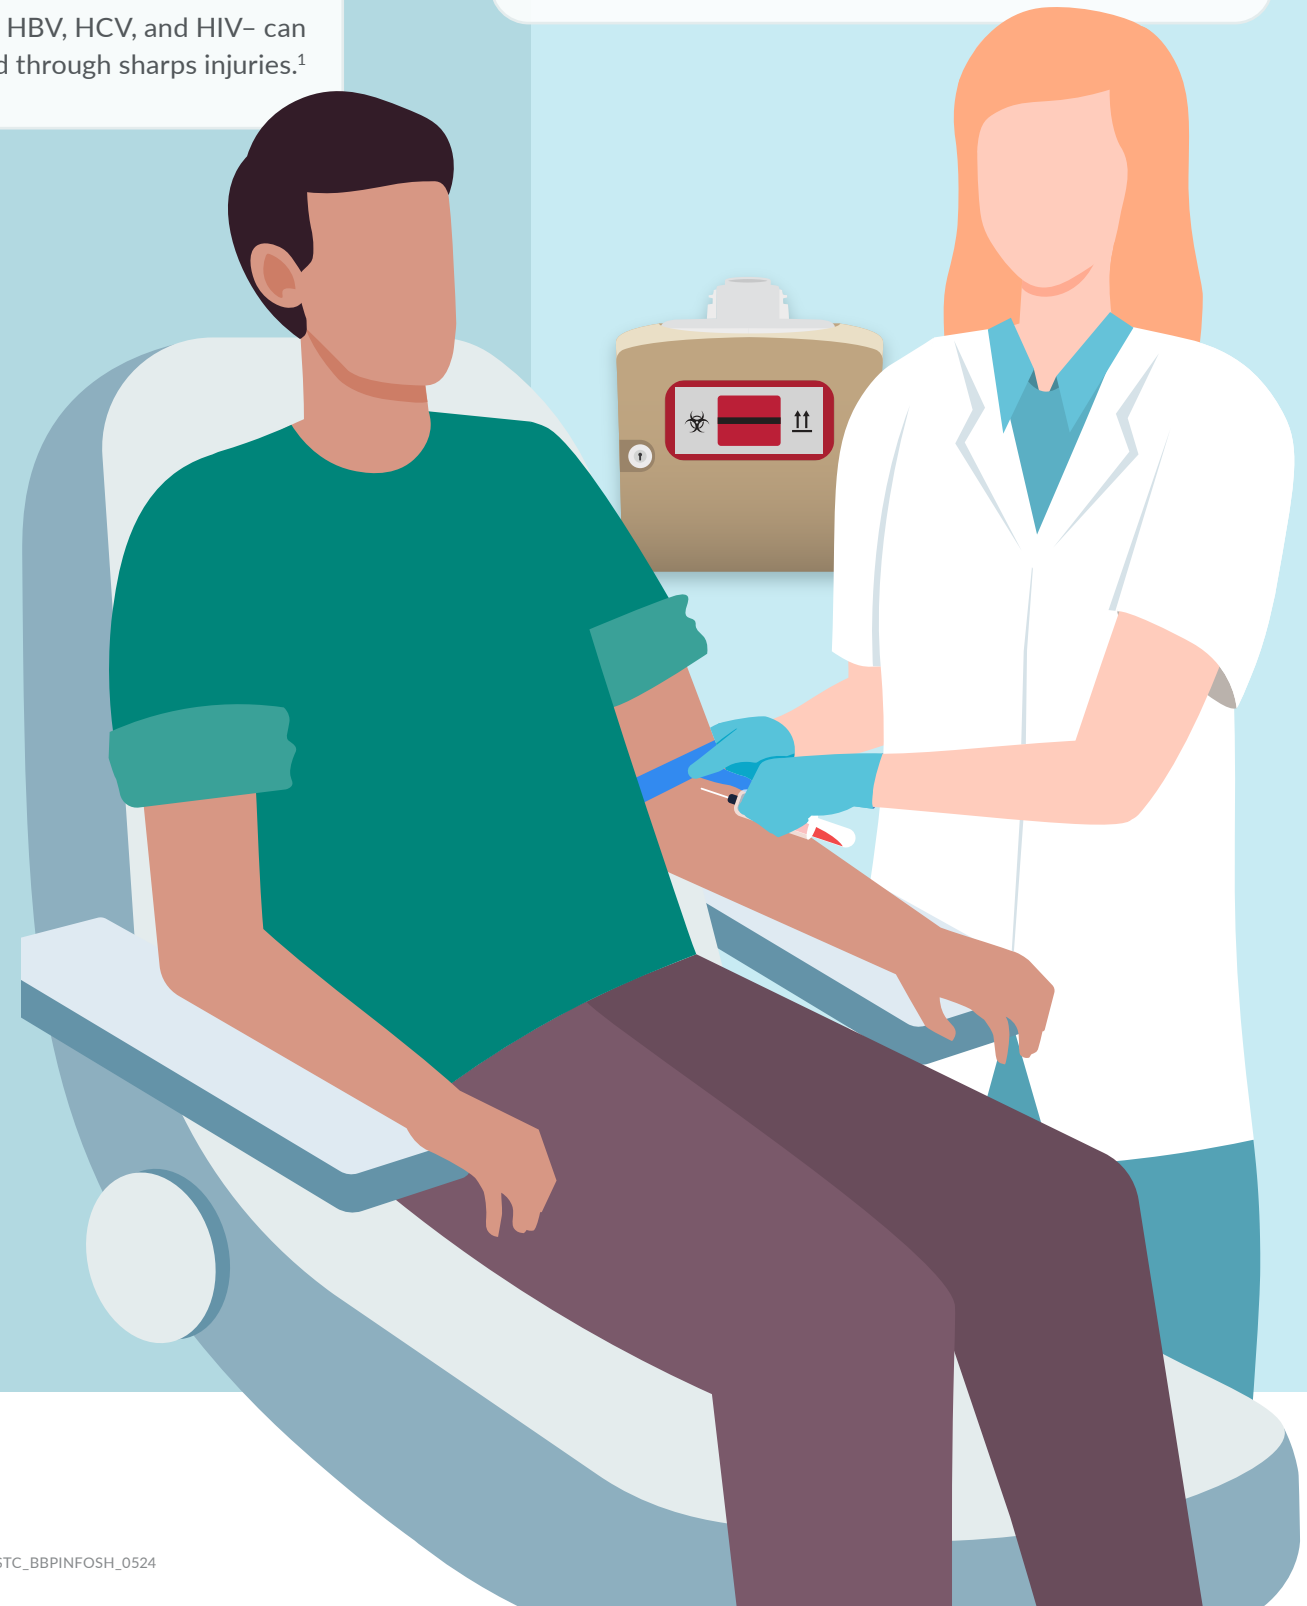

including HBV, HCV, and HIV- can be spread through sharps injuries.¹

Each year, healthcare personnel in the U.S. sustain

385,000
NEEDLESTICKS

and other such sharps-related injuries, increasing BBP susceptibility.²

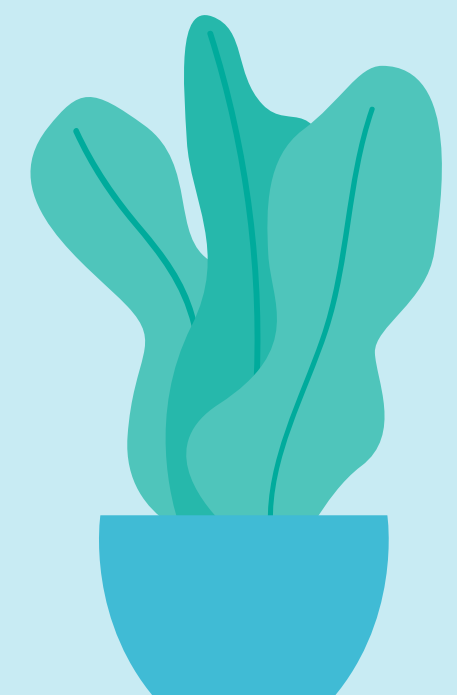

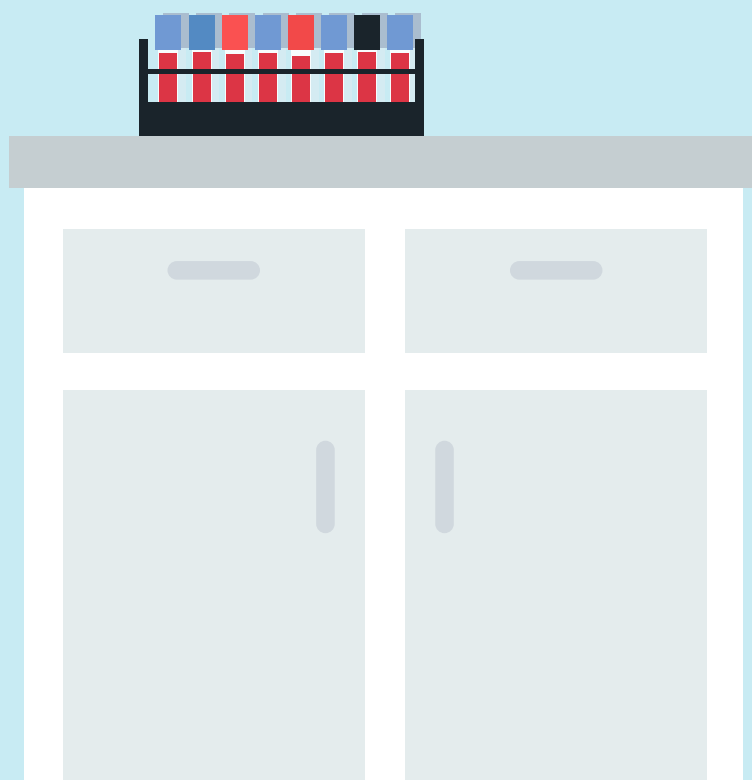

What Are Bloodborne Pathogens and How Can You Protect Yourself?

Bloodborne pathogens (BBPs) are microorganisms in human blood and other potentially infectious materials (OPIM) that can cause disease.

How to Help Protect Yourself From BBP Exposure Incidents

While occupational BBP exposure incidents are higher in healthcare settings, there are four key measures that can help provide protection.
